Alerting Abstract SU A

In the vertebral column segment endoprosthesis, one body part is made in the form of a head (6) with cylindrical ram (7), and the other in the form

of a cup (9) with cavity (8) congruent to the ram (7). The shock absorbers are a sectional resilient ring (13) on the ram (7) and two transverse grooves (10,11) with resilient filling in the cup (9).

ADVANTAGE - This vertebral column segment endoprosthesis assures support and motion function. Bul.16/30.4.90 @(3pp Dwg. No.1/2)@
